Safety and Training

Our company is dedicated to providing a safe work environment and we are continually training ourselves and others in safer work habits. Right Electric has taken the lead as a contractor in understanding and implementing the new safety rules and regulations of the NFPA and OSHA. We are constantly studying and learning the changes to code issues and OSHA requirements. In addition to staying on top of these changes for ourselves we go the extra step by providing services such as training and explaining for our customers.

There are several programs and services we offer, such as short electrical safety meetings in place of your normal monthly training (we have found this to be a valuable service as it's a change from the monthly video and short speak by the employees' normal supervisor). We tailor these to your requests and will do a one time class or a monthly/bi-monthly class. We also offer assistance in implementing programs such as ground testing, voltage rated gloves and tool testing, and panels and circuit documentation.

We are pleased to announce that we now offer **OSHA Outreach Training for the Construction Industry Safety & Health 10 and/or 30 Hour courses**. Our Safety Director is an authorized outreach trainer and all students will receive course completion cards from the Dept. of Labor. Please contact our office for scheduling.

Right Electric strives to be on the leading edge as a full service contractor. We do more than simple installations. We have dedicated employees trained, certified or experienced in Design and Build, Classified Electrical (CL I, II & III) installations/requirements, High Voltage Line Work, Process Controls, Fire Alarm Systems, and Energy Management and Metering.

Got questions big or small, give us a call!
